SUMMARY

Full-stack developer shipping production-grade web applications across the MERN stack. Recent work includes the public-facing launch site for **Nextera Labs**, an EdTech startup serving 16–21 year-olds across India. Strong DSA foundation and a bias toward shipping over theorising.

TECHNICAL SKILLS

Languages: JavaScript, Python, Java, C++
Frontend: React.js, Tailwind CSS, HTML5, CSS3, Responsive Design
Backend: Node.js, Express.js, REST APIs, JWT Auth
Databases: MongoDB, Firebase
Tooling: Git, Docker, Postman, Vercel

PROJECTS

Nextera Labs — Startup Landing Page & Cohort Acquisition Funnel *nextera-labs.in · Live*

React · Tailwind CSS · Framer Motion · Vercel · Google Forms API

- Shipped the flagship marketing site for **India's first peer-led AI builder community**, driving end-to-end enrollment for two paid cohorts (Class 11–12 at ₹499, post-12th at ₹1,999).
- Built a mobile-first layout scoring **[92+]/100** on Lighthouse Performance with LCP under **[1.8]s** on 4G — critical for India's mobile-first Gen-Z audience.
- Translated the brand system (dark/amber/indigo palette, Syne + DM Mono) into a reusable Tailwind design-token config, cutting page-build time ~**40%** across subsequent pages.
- Engineered a multi-step application flow (*"The Signal"*) piping submissions to Google Sheets and triggering a founder-side ping — compressing lead-response from hours to under 5 minutes.
- Post-launch: **[NN] applications and [NN] qualified sign-ups** in the first [X] weeks, directly feeding the founding cohort.

SproutCircle — Full-Stack Daycare Operations Platform *GitHub*

Node.js · Express · MongoDB · JWT · WebSockets

- Built a multi-tenant daycare platform covering child profiles, schedules, staff messaging, and parent updates — tested with **[X pilot users]** across [X] centers.
- Designed a real-time child-tracking module on MongoDB change streams, delivering parent notifications within **[<2]s** of an event being logged by staff.
- Cut schedule-endpoint query latency by **[~60%]** via a compound (centerId, childId, date) index and in-memory caching of the day's active roster.
- Hardened auth: JWT access/refresh rotation, role-based middleware (admin / staff / parent), and brute-force rate-limiting on login.

EDUCATION

Bennett University, Greater Noida *Sept 2023 – June 2027*
B.Tech, Computer Science & Engineering · CGPA 7.21/10 · Coursework: DSA, OOP, DBMS, OS, Networks

Assumption Convent School, Abohar · ICSE Class XII *90.4% · 2022*

CERTIFICATIONS

- **Meta Backend Developer Specialization** — Coursera
- **Data Structures** — UC San Diego, Coursera
